JOYSALE SERVER REQUIREMENTS

INDEX

1. SERVER REQUIREMENTS & HOSTING SUGGESTIONS

1.1 Server requirement for JoySale Script

Language / Development	Tool Names
Operating System	Ubuntu or Any Linux Distribution Windows
Applications	Apache, NodeJS
Database	MySQL
Libraries	ModeRewrite (rewrite should be enabled), CURL
Packages	PHPMyadmin
PHP Extensions	**ionCube** loader (Version 6 or above)

1.2 Server Hosting Suggestions

Our demo servers are running on DigitalOcean Droplets with Ubuntu OS, with 512MB RAM, with One CORE processor. It supports around 800 concurrent visits. Our development team recommend the following two hostings or any cloud server with SSD hard disk for a good performance.

- DigitalOcean (Signup link: https://m.do.co/c/2e0c2f84d5dc)
- Amazon AWS (Singup link: https://goo.gl/2vceXS)

Both servers are expandable on run time.

1.3 Terms and conditions on other hostings

Technical support team needs the following details with all the application and softwares installed already on the server.

1) If you use the server Digital Ocean or AWS, We need the following details.

   i) Root access username and password

   (OR)

   Keyfile,Username(root access)

   ii) SSH / SFTP / FTP access to the file system.

   ii) PHPMyadmin username and password.

2) If you use other servers, We need full access like Cpanel or WHM panel access
